YENTLY · YENTLY KIDS

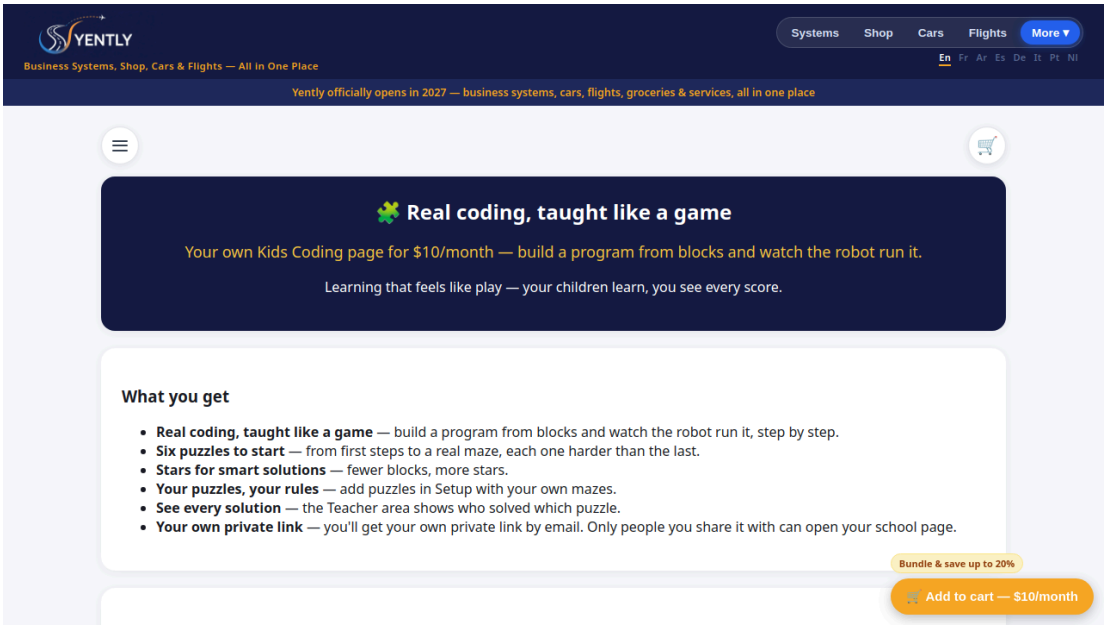

Your Kids Coding School
A Step-by-Step Guide

From buying it to your first solved puzzle.

Yently — Everything you need, gently in one place.

November 2026 · For parents and teachers

This guide walks you through your Kids Coding school from start to finish: how to buy it, how to set up your school and your puzzles, how children play, and how the Teacher tab shows you every score. Every step shows you exactly where to click.

Your Coding page. This is the page parents see the offer on — and the page you buy it from. The gold button at the bottom right adds it to your cart.

Keep this guide with your setup email. It covers everything from the first click to the first solved puzzle, in the order you will do it.

1. What you get

Your Kids Coding school is your own coding page for children on the web, built and hosted by Yently. It has three parts:

- **Your own school page** — your school's name, about text and puzzles, on your own private link. Only people you share the link with can open your school page.
- **Play, for the children** — six puzzles to start, from first steps to a real maze. Children build a program from blocks and watch the robot run it, step by step.
- **The Teacher tab, for you** — who solved which puzzle, and how many stars they earned.

Children pick their own name and play. Nothing is graded and nothing is timed — a child can try a puzzle again and again until the robot reaches the star.

There is no app to install and no hardware to buy. It works on the phones and tablets you already have, and on a computer too.

$10/month First month free. No setup fee. Add more subjects and save — see section 10.

2. How to buy it

Buying takes three clicks. There is no payment to make on the page today, and your first month is free.

Step 1. Find the Coding subject

Open **yently.com** and tap **More** in the top menu, then **Yently Kids**. Coding is one of the nine subject rows — $10/month. Tap the blue **“See it →”** button on the right of that row.

Step 2. Add it to your cart

On the Coding page, tap the gold **“Add to cart — $10/month”** button at the bottom right of the screen.

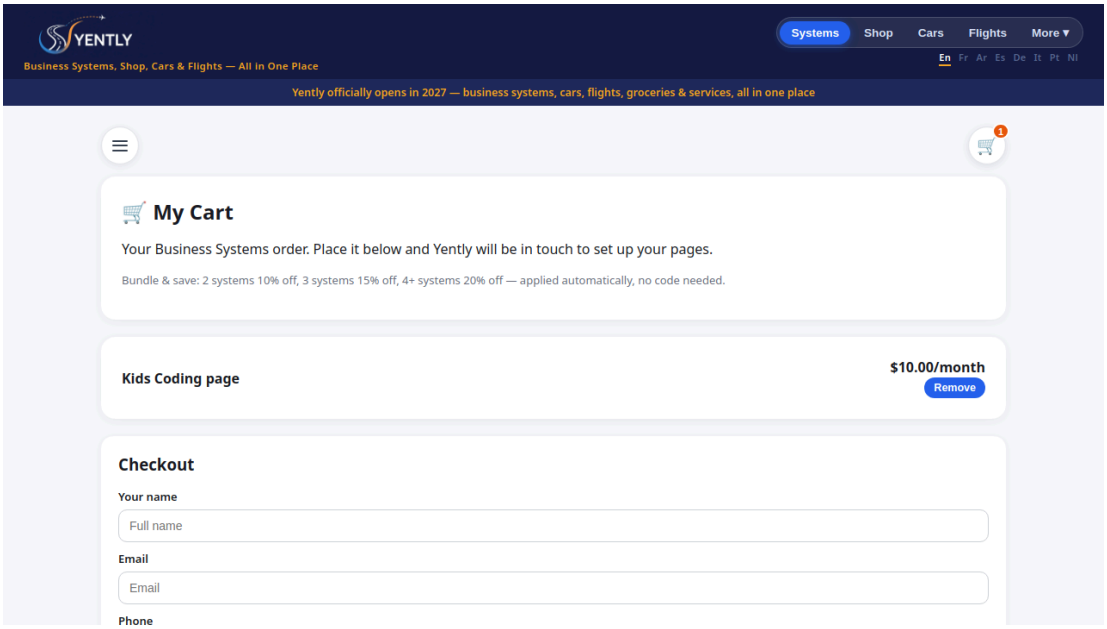

There is a second way in, on the same page: fill in the **“Get your Kids Coding page”** form lower down (your name, school name, email and phone) and tap **“Send request”**. Yently will be in touch to set your school up.

Step 3. Check out

Tap **“Go to My Cart”** — or the cart icon at the top right. Fill in the checkout form:

- **Full name**, **Email** and **Phone**.
- **Note (optional)** — your school name and city help Yently set your page up.

Check the total: **List total: $10.00/month** and **Total: $10.00/month**. Then tap the blue **“Place order”** button.

My Cart. The Kids Coding page at $10.00/month, with the checkout form below it. No card details are asked for.

Step 4. What happens next

Your order goes to Yently. There is no payment to make on the page today. Yently sets your school up and emails you **your own private link**, plus **your own username and password**, and the **teacher login**. Nothing to install, nothing to build.

3. Your first login

Open your private link from the email. The page has **three tabs** at the top: **Play, Teacher, Setup**.

Tap **Setup** and log in with the username and password from your email (the “Setup sign-in” boxes: Username and Password).

> **Two logins.** Your own Setup login is for you alone. The **teacher password** is one shared password for the Teacher tab. Keep your Setup login to yourself.

If a link shows “School not found”, the link does not point to a school yet — check the link and try again, or ask Yently for your school link.

4. Set up your school

After you log in to the Setup tab, you will see a note at the top:

> “Your changes are saved as a draft. Children still see the approved puzzles until you upload and Yently approves.”

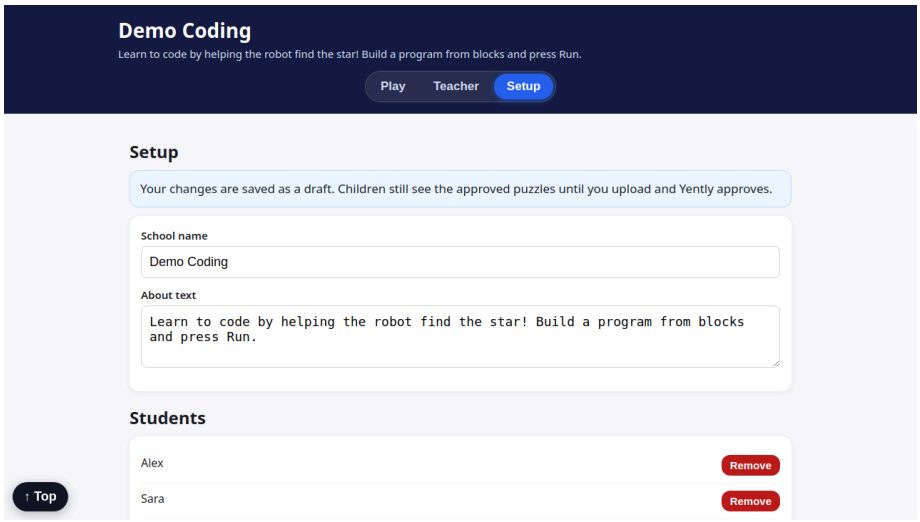

That means you can change things safely. Nothing goes live until you say so and Yently approves it.

Fill in these fields:

- **School name** — the name shown at the top of your page.
- **About text** — a short line about your school, shown under the name.

Then add your students: type a name in the **“New student name”** box and tap **“+ Add student”**. To remove a name, tap **“Remove”** next to it. Children pick their name from this list when they play.

When you are done, tap **“Save draft”**. Your changes are saved as a draft — children still see the approved puzzles. When you are happy with everything, tap **“Upload for approval”**. Yently approves it and your changes go live. You will get an email once they are live.

The Setup tab. Your school name and about text at the top, with the draft note above them. The Students list sits below, on the same tab.

5. Make your own puzzles

In the Setup tab, under **Puzzles**, tap **“+ Add puzzle”**. An editor opens. Fill it in:

- **Puzzle name** — the name children see.
- **Rows (5–7)** and **Columns (5–7)** — the size of the maze grid.
- **Walls** — one “row,col” per line, for example 2,0. Each wall is a dark square the robot cannot pass.
- **Start row** and **Start column** — where the robot begins. **Start direction** — which way it faces: Up, Right, Down or Left.
- **Goal row** and **Goal column** — where the star sits.
- **Par — blocks for 3 stars** — how many blocks a smart solution needs.
- **Hint for the child** — a short clue, shown under the puzzle name.

A live preview of the maze appears as you type, and the editor checks the puzzle before it can be saved: start and goal must be inside the grid, not on a wall, and not the same cell. Whether the goal can be reached is not checked — a hard puzzle is fine.

Tap **“Save puzzle”** to keep it. To change a puzzle later, tap **“Edit”** on its card; to remove one, tap **“Delete”** — it asks “Delete this puzzle?” first.

Your school starts with six puzzles: **First steps, Around the corner, The long way, Two turns, Maze,** and **Repeat to win** — from first steps to a real maze, each one harder than the last.

When your puzzles are done, tap **“Save draft”**, then **“Upload for approval”**. Yently approves them and your new puzzles go live.

6. The Play tab — how children play

Tap the **“Play”** tab. This is what the children see — no login needed, just your private link.

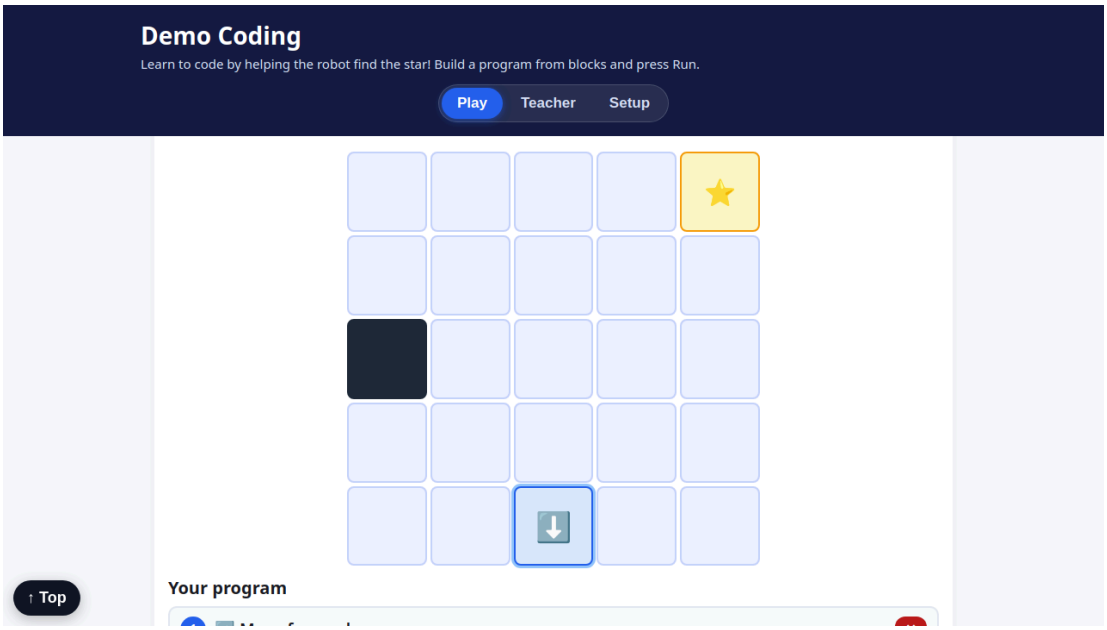

First, each child picks their own name from the row of names. The page remembers the name on that device, so the child does not pick it again next time.

Then the child picks a puzzle. Each puzzle shows its size and its par — for example “5×5 · par 4” — and the stars earned so far, or “not solved yet”.

Under the maze, the child builds a program from blocks:

- **Move forward** — the robot moves one square in the direction it faces.
- **Turn left** and **Turn right** — the robot turns on the spot.
- **Repeat 2×, 3×, 4×** — repeats the *next* block that many times. For example, Repeat 3× then Move forward moves 3 steps, but only uses 2 blocks.

Tap **“Run”** and the robot follows the program through the maze, one step at a time. **“Reset robot”** puts the robot back at the start. **“Clear program”** empties the blocks so the child can start over. To remove one block, tap the red × on it.

The Play tab. The maze — dark squares are walls, the gold star is the goal. “Your program” begins below it.

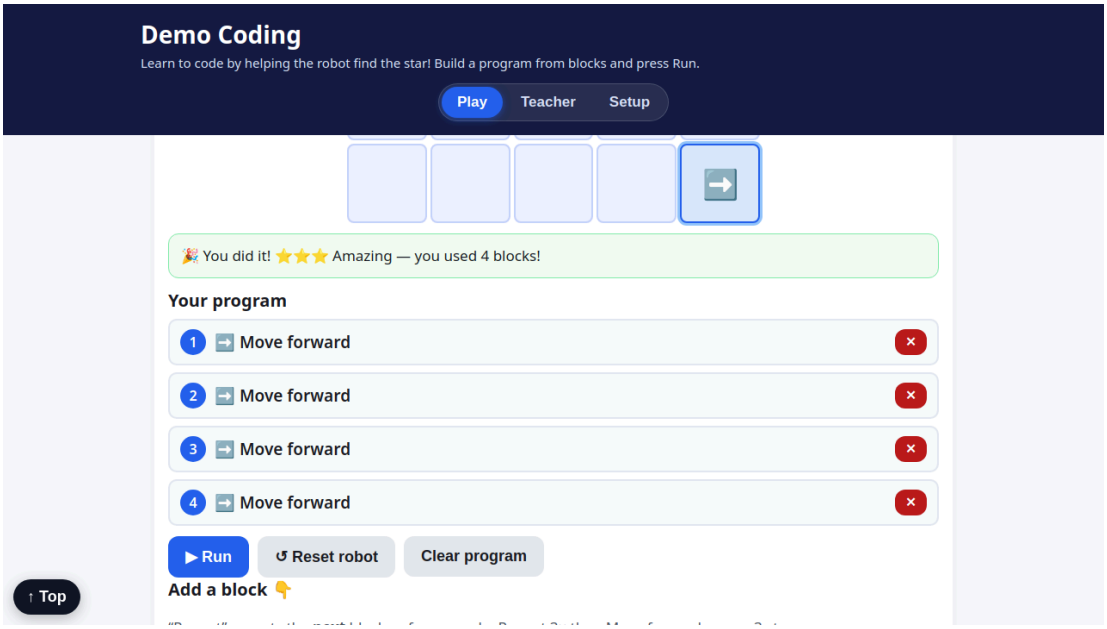

7. Stars — how scoring works

Reaching the star earns stars — for a smart solution, not just a finished one:

- **3 stars** — the program uses par blocks or fewer.
- **2 stars** — the program uses par + 1 or par + 2 blocks.
- **1 star** — the robot reaches the star with more blocks than that.

So a child can solve a puzzle with 1 star, then try again with fewer blocks to earn more. The best result is the one that counts — solving it again with fewer blocks replaces the lower score.

Stars are saved under the child's name, in the school's records, so they are still there next time the child plays — and you can see them in the Teacher tab.

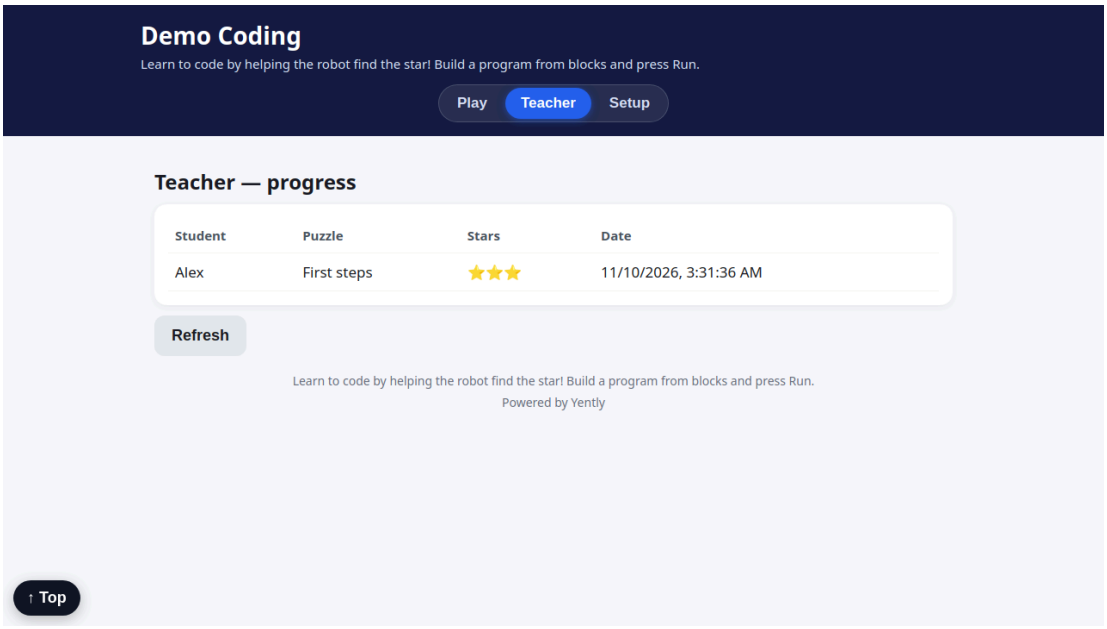

Three stars. "First steps" solved in 4 blocks — exactly par — and the page says so: "You did it! Amazing — you used 4 blocks!" The four Move forward blocks are listed under "Your program".

8. The Teacher tab

Tap the **“Teacher”** tab. It asks for the teacher password first — see section 9.

Then you see a table of every solved puzzle: **Student, Puzzle, Stars, Date**. One row per solve, newest first. Tap **“Refresh”** to load the newest solves.

If no puzzle has been solved yet, the page says so: “No puzzles solved yet. When a child reaches the star, their stars show up here.”

Teacher — progress. Alex solved “First steps” with three stars. The table shows the student, the puzzle, the stars, and the date.

9. The teacher password

One shared password unlocks the **Teacher** tab. Every teacher uses the same one, on any device.

The password is **set by Yently** and comes with your setup email. There is no place in Setup to change it yourself — if you want it changed, ask Yently and they will change it for you.

The password is never saved on the device. If the page is reloaded, the teacher enters it again.

If your school has no teacher password set, the Teacher tab stays open and anyone with the link can see the scores. Yently sets a password for you, so this does not happen by accident.

10. Add-ons — make it yours for a little more

Each add-on is added the same way as the Coding subject — from its own page, into the same cart:

- **Clean Link — $2/month.** Your own short link, yently.com/your-name, instead of the long one. Easier to print on a card, a poster or a window.
- **TV Gallery — $2/month.** Your pictures on the big screen — a slideshow on the TV in your classroom.
- **Live Chat — $3/month.** Chat with visitors right on your page.

> **Bundle & save:** 2 plans 10% off, 3 plans 15% off, 4 or more plans 20% off. Your saving is applied automatically, no code needed. Subjects count like any plan — all 9 Yently Kids subjects are $90 a month, or $72 with 20% off.

11. Prices at a glance

Plan	Price	First month
Kids Coding school	$10/month	Free
All 9 Yently Kids subjects	$90/month	Free
Clean Link	$2/month	Free
TV Gallery	$2/month	Free
Live Chat	$3/month	Free

Bundle: 2 plans 10% off, 3 plans 15% off, 4 or more plans 20% off — applied automatically. All 9 subjects at 20% off are $72/month. No setup fee.

Why Yently: $10 a month, first month free, no setup fee, cancel any time. Yently builds it, hosts it, and keeps it running. You just use it.

12. Need help?

Use the **“Get your Kids Coding page”** form on the Coding page: fill in your name, school name, email and phone, write your question in the message box, and tap **“Send request”**. Yently will be in touch to set up your Kids Coding page.

> **Your first puzzle, in short:** buy it on yently.com → get your link and logins by email → log in to Setup → add your students → share the link → children pick their name, pick a puzzle, and press Run.

Thank you for choosing Yently. Your school page is ready when you are — and Yently is one message away if you need a hand.
